

LISTING OF CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the
Application.

1-20. (Cancelled)

21. (New) A method for enabling a wireless client device to communicate with at least one server having one or more applications residing thereon, the method comprising the steps of:

enabling the wireless client device to select an application residing on the at least one server;

enabling the wireless client device to select at least one application action associated with the selected application residing on the at least one server;

executing the at least one selected application action on the at least one server;

formatting at least one application output associated with the at least one selected application action based on a profile of the wireless client device; and

transmitting the formatted at least one application output to the wireless client device.

22. (New) The method of claim 21 wherein the selected application comprises at least one of an email application, a calendar application, a personal directory application, or a public directory application.

23. (New) The method of claim 21 wherein executing the at least one selected application action comprises at least one of creating at least one new file, opening at least one file, viewing at least one file, editing at least one file, searching at least one file, saving at least one file, closing at least one file, and deleting at least one file.

24. (New) The method of claim 21 wherein the profile of the wireless client device comprises at least one of a feature of the wireless client device and a command associated with a

previously selected application action.

25. (New) The method of claim 24 wherein the feature of the wireless client device comprises at least one of an input interface feature, a display feature, and a data processing feature.

26. (New) The method of claim 21 wherein formatting the at least one application output comprises at least one of removing an object or artifact contained in the at least one application output, and altering the object or artifact contained in the at least one application output to reduce an amount of information that the object or artifact contains.

27. (New) The method of claim 21 wherein the wireless client device comprises at least one of a data-capable wireless phone, an interactive pager, or a personal digital assistant.

AI Cont
28. (New) A wireless communication system, the system comprising:
at least one server having one or more applications thereon; and
at least one wireless client device comprising:

a views/folders module that enables the at least one wireless client device to display options associated with a selected application residing on the at least one server;

a default and custom actions module that enables the at least one wireless client device to select at least one application action associated with the selected application to be executed on the at least one server; and

a forms module that enables the wireless client device to view at least one application output associated with the at least one selected application action.

29. (New) The system of claim 28 further comprising a customization module that enables the at least one wireless client device to customize at least one view of the at least one application output.

30. (New) The system of claim 29 wherein the customization module further enables the at least one wireless client device to customize at least one of a display language, a time zone, a date format, and a font format.

31. (New) The system of claim 28 wherein the default and custom actions module enables the at least one wireless client device to select at least one of creating at least one new file, opening at least one file, viewing at least one file, editing at least one file, searching at least one file, saving at least one file, closing at least one file, and deleting at least one file.

32. (New) The system of claim 28 wherein the selected application comprises at least one of an email application, a calendar application, and a public directory application.

33. (New) A wireless client device capable of communicating with at least one server having one or more applications thereon, the wireless client device comprising:

AI Cont.
a views/folders module that enables the wireless client device to display options associated with a selected application residing on the at least one server;

a default and custom actions module that enables the wireless client device to select at least one application action associated with the selected application to be executed on the at least one server; and

a forms module that enables the wireless client device to view at least one application output associated with the at least one selected application action.

34. (New) The wireless client device of claim 33 further comprising a customization module that enables the wireless client device to customize at least one view of the at least one application output.

35. (New) The wireless client device of claim 34 wherein the customization module further enables the wireless client device to customize at least one of a display language, a time zone, a date format, and a font format.

36. (New) The wireless client device of claim 33 wherein the default and custom actions module enables the wireless client device to select at least one of creating at least one new file, opening at least one file, viewing at least one file, editing at least one file, searching at least one file, saving at least one file, closing at least one file, and deleting at least one file.

37. (New) The wireless client device of claim 33 wherein the selected application comprises at least one of an email application, a calendar application, a personal directory application and a public directory application.

38. (New) A storage medium for storing a machine readable code, the machine readable code being executable to enable a wireless client device to communicate with at least one server having one or more applications residing thereon, according to the steps of:

enabling the wireless client device to select an application residing on the at least one server;

enabling the wireless client device to select at least one application action associated with the selected application residing on the at least one server;

executing the at least one selected application action on the at least one server;

formatting at least one application output associated with the at least one selected application action based on a profile of the wireless client device; and

transmitting the formatted at least one application output to the wireless client device.

39. (New) The storage medium of claim 38 wherein the selected application comprises at least one of an email application, a calendar application, or a public directory application.

40. (New) The storage medium of claim 38 wherein executing the at least one selected application action comprises at least one of creating at least one new file, opening at least one file, viewing at least one file, editing at least one file, searching at least one file, saving at least one file, closing at least one file, and deleting at least one file.

41. (New) The storage medium of claim 38 wherein the profile of the wireless client device comprises at least one of a feature of the wireless client device and a previously selected application action.

42. (New) The storage medium of claim 41 wherein the feature of the wireless client device comprises at least one of an input interface feature, a display feature, and a data processing feature.

*AI
cancel* 43. (New) The storage medium of claim 38 wherein formatting the at least one application output comprises at least one of removing an object or artifact contained in the at least one application output, and altering the object or artifact contained in the at least one application output to reduce an amount of information that the object or artifact contains.

44. (New) The storage medium of claim 38 wherein the wireless client device comprises at least one of a data-capable wireless phone, an interactive pager, or a personal digital assistant.
